Subject: Syntax and edits to implement decisions in 00-155 concerning ALLOCATABLE
From: Van Snyder
References: 00-155

1 Introduction

In paper 00-155, Malcolm provided alternative syntaxes to implement the capability to specify the type of object to be allocated by reference to another object. There was a straw vote, and the syntax "SOURCE = *source-variable*" won. This paper provides edits, as outlined in 00-155 but updated to reflect the result of the straw vote and to refer to 00-007r1.

2 Edits

Edits refer to 00-007r1. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by immediately following text, while a page and line number followed by + indicates that immediately following text is to be inserted after the indicated line. Remarks for the editor are noted in the margin, or appear between [and] in the text.

or SOURCE = *source-variable*	102:15+

R631a *source-variable*	**is** *variable*	102:23+

Constraint: If SOURCE= is specified, *type-spec* shall not be specified, *allocation-list* shall contain only one *allocate-object*, which shall be type compatible (5.1.1.8) with *source-variable*. `102:38+`

Constraint: The *source-variable* shall be a scalar or have the same rank as the *allocate-object*.

Constraint: Corresponding kind type parameters of *allocate-object* and *source-variable* shall have the same values.

[Editor: After ";" insert "if a *source-variable* is specified, the allocation allocates an object whose dynamic type and type parameters are the same as those of the *source-variable*;"] `103:6`

If SOURCE= is present, *source-variable* shall be conformable (2.4.5) with the *allocation*. If the value of a nondeferred nonkind type parameter of *allocate-object* is different from the value of the corresponding type parameter of *source-variable*, an error condition occurs. If the allocation is successful, *source-variable* is then assigned to *allocate-object* as if by intrinsic assignment for objects whose declared type is the dynamic type of *source-variable*. `103:25+`

J3 internal note

> Unresolved issue xxx
> ALLOCATE(... SOURCE=...) begs for an example.
