Subject: Issue 119
From: Van Snyder

1   Background

Issue 119 advocates to put some use to the square brackets that have been added to the Fortran alphabet – namely to enclose array constructors. This paper does that.

2   Edits

Edits refer to 01-007. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by immediately following text, while a page and line number followed by + (-) indicates that immediately following text is to be inserted after (before) the indicated line. Remarks are noted in the margin, or appear between [and] in the text.
