5 Subject: Additional Normative References

6 **Rationale**

7 In looking through the ISO C standard, I noticed that there are several additional normative
8 references listed that appear to be relevant to the Fortran standard as well. We should add them to
9 the list in section 1.8.

10 **Technical Specification and Syntax**

11 Add ISO standards 31, 2382, and 4217 to the list in section 1.8. Reorder the list in numerical
12 order by standard number, regardless of the issuing authority.

13 **Edits**

14 Edits refer to the 01-007.

15 [7:7-18] Reorder the list in numerical order by standard number, regardless of the authority
16 issuing the standard. Add the following standards to the list.

17 ISO 31-11:1992, *Quantities and units - Part 11: Mathematical signs and symbols for the use in the*
18 *physical sciences and technology.*

19 ISO/IEC 2382-1:1993, *Information technology - Vocabulary - Part 1: Fundamental terms.*

20 ISO 4217, *Codes for the representation of currencies and funds.*

21 **References**

22 01-007, Fortran 2000 Draft

23 ISO/IEC 9899:1999(E), International Standard - Programming Languages - C
