

Response to UK Edit E11

1

2 To: J3
3 From: Craig Dedo
4 Date: April 2, 2003
5 Subject: Response to UK Edit E11

6 **Rationale:**

7 The UK suggested edit E11 (in WG5-N1506) was:

8 E11 Section 9.6.2 Page 204:23

9 Change: "A wait operation terminates a pending data transfer operation" to "A wait operation
10 terminates (9.5.4) a pending data transfer operation".

11 Rationale: Without careful reading of 9.6.1, this could be interpreted to mean that the wait
12 interrupts and stops a data transfer operation.

13 Richard rejects this on the grounds that the cross-reference is to a data transfer statement rather
14 than to a data transfer operation. I still believe that the text in the document is open to
15 misinterpretation and would benefit from clarification. Any advice from /jor would be gratefully
16 received.

17 **Edits:**

18 JOR reviewed this concern and recommends the following edit.

19 [204:23] In the first sentence, change "terminates" to "completes the processing of". In the second
20 sentence, change "terminates" to "completes".
