1 Edits

Edits refer to 99-007r2. Page and line numbers are displayed in the margin. Absent other instructions, a page and line number or line number range implies all of the indicated text is to be replaced by immediately following text, while a page and line number followed by + indicates that immediately following text is to be inserted after the indicated line. Remarks for the editor are noted in the margin, or appear between [and] in the text.

A **deferred type parameter** is a nonkind type parameter for which a *type-param-value* is a colon. Entities with the ALLOCATABLE or POINTER attribute may have deferred type parameters. 32:34+

The values of the deferred type parameters of an allocatable object are determined by successful execution of an ALLOCATE statement (6.4.1), execution of a derived-type intrinsic assignment statement (7.5.1.5), or by argument association (12.4.1.2).

The values of the deferred type parameters of a pointer object are determined by successful execution of an ALLOCATE statement (6.4.1), execution of a pointer assignment statement (7.5.2), or by argument association (12.4.1.2).

[Editor: delete. Was in the wrong place, anyway.] 32:41-33:7
