Subject: Second draft of edits for Name optional on END module & internal subprog
From: Van Snyder
Reference: 04-396r1

1   Introduction

Assuming forward types for allocatable components get onto the J3 work plan, the reason for this paper
is to get a running start on the edits.

The title of the "done" paper 04-396r1 is "Name optional on END module & internal subprog" but the
specs say to make FUNCTION or SUBROUTINE (and therefore *name*) optional for module procedures.
There are two sets of edits here. One to make FUNCTION/SUBROUTINE [*name*] optional for module
procedures, and one to make them optional everywhere.

2   Edits

Edits refer to 04-007. Page and line numbers are displayed in the margin. Absent other instructions, a
page and line number or line number range implies all of the indicated text is to be replaced by associated
text, while a page and line number followed by + (-) indicates that associated text is to be inserted after
(before) the indicated line. Remarks are noted in the margin, or appear between [and] in the text.

2.1   FUNCTION/SUBROUTINE name optional on module subprograms

[Editor: Delete "or module".]   280:11

[Editor: Delete "or module".]   282:14

2.2   FUNCTION/SUBROUTINE name optional everywhere

[Editor: Delete C1243.]   280:11

[Editor: Delete C1248.]   282:14-15
